Московский государственный технический университет им. Н.Э. Баумана

Факультет «Информатика и системы управления» Кафедра ИУ5 «Системы обработки информации и управления»

Курс «Парадигмы и конструкции языков программирования» Отчет по рубежному контролю № 2 Вариант Г-13

Выполнил: студент группы ИУ5-34Б Багин М. В. Проверил: преподаватель каф. ИУ5 Гапанюк Ю. Е.

Москва, 2024 г

Постановка задачи:

Рубежный контроль представляет собой разработку тестов на языке Python. 1) Проведите рефакторинг текста программы рубежного контроля №1 таким образом, чтобы он был пригоден для модульного тестирования.

2) Для текста программы рубежного контроля №1 создайте модульные тесты с применением TDD - фреймворка (3 теста).

Рефакторинг кода заключался в перенос логики задания в функции для последующего тестирования.

Текст программы

main.py
